

# Shiny App ReadMe

*Michael Simpson*

*February 21, 2015*

The Ticker App I created is a very simple way to get stock price information for a specific stock on a specific date (2007-Present)

after navigating to the app website (<http://mikesimpson.shinyapps.io/CourseProject/>) simply enter the ticker symbol for a specific company, then either enter a date, or use the dropdown calender selector to find your desired date.

A few nuances to the app include -you must select a date when the market was open (i.e no weekends or holidays) -capitalization does not matter -you may not just enter a company name it must be its ticker symbol (i.e. AAPL, YHOO, FDX etc.) -the App just show the closing price on the specified date
